## Intoeing

**Intoeing** (pigeon toes) is a condition in which the feet point inward when walking. It is commonly seen in children and may resolve in very early childhood with no treatment or intervention. The child should be examined by a foot and ankle surgeon if the intoeing is causing significant tripping, difficulty with normal activity, pain, difficulty with shoes or is not resolved in early childhood. Structural problems may be causing the intoeing, which require treatment by a foot and ankle surgeon.
